PREFACE

This report presents the results of a detailed Air Force Occupational Survey of the Personnel Systems Management career ladder (AFSC 3S0X2). Authority for conducting occupational surveys is contained in AFI 36-2623. Computer products upon which this report is based are available for the use of operations and training officials.

The survey instrument was developed by Chief Master Sergeant Herschel Firebaugh, Inventory Development Specialist, with computer programming support furnished by Mrs. Jeanie C. Guesman. Mr. Richard G. Ramos provided administrative support. First Lieutenant T. Scott Koons, Occupational Analyst, analyzed the data and wrote the final report. This report has been reviewed and approved by Mr. James B. Keeth, Chief, Airman Analysis Section, Occupational Analysis Flight, Air Force Occupational Measurement Squadron (AFOMS).

Copies of this report are distributed to Air Staff sections, major commands, and other interested training and management personnel. Additional copies are available upon request to AFOMS, Attention: Chief, Occupational Analysis Flight (OMY), Randolph AFB Texas 78150-4449 (DSN 487-6623).

SUMMARY OF RESULTS

1. Survey Coverage: This is the first Occupational Survey Report conducted on the Personnel Systems Management (PSM) career ladder. Personnel were surveyed of obtain current job and task data for use in reviewing training documents and updating training programs. Survey results are based on data collected from 476 active duty, Air National Guard (ANG), and Air Force Reserve (AFRES) Personnel.
2. Specialty Jobs: One cluster and five jobs were identified in the career ladder structure analysis. Sixty to 80 percent of the survey sample grouped in the core PSM Cluster. These personnel focus on the total spectrum of tasks involved in the day-to-day activities of a PSM office. The other five jobs identified were Entry-Level PSM Job, PSM Readiness Job, Chief PSM Job, HQ/MAJCOM PSM Job, and Systems Support Analyst Job.
3. Career Ladder Progression: Members entering this career ladder must hold a 5-skill in the AFSC 3S0X1, Personnel, career ladder. A typical pattern of progression is noted within the PSM career ladder. Personnel at the 3-and 5-skill levels work in the technical jobs of the career ladder and spend most of their time performing personnel data system and PC-III activities. As incumbents move up to the 7-skill level, higher percentages perform supervision and training functions, although a majority of these individuals still perform technical tasks.
4. Training Analysis: The Specialty Training Standard (STS) and Plan of Instruction (POI) for course 3ALR3S032 are generally supported by the survey data. A few areas in both documents had low percentages of personnel performing matched tasks and should be reviewed. Also, several unmatched tasks should be looked at for possible inclusion in future revisions.
5. Job Satisfaction Analysis: The job satisfaction measures for the survey sample were generally high. There are no perceivable differences between skill levels or between active-duty, ANG, or AFRES personnel. Only one of the jobs identified expressed dramatically lower expressed job interest.
6. Special Analysis: A comparison between active duty, ANG, and AFRES personnel found very few differences. While active-duty personnel dominate most of the jobs identified, ANG and AFRES personnel appear to be doing the same basic jobs and performing essentially the same tasks. It was noted, however, that ANG and AFRES personnel are not as specialized as their active-duty counterparts. There are no apparent differences in either training policies or in job satisfaction.
7. Implications: Overall, the AFSC 3S0X2 career ladder is functioning well. Job progression is normal and is described accurately in the AFMAN 36-2108 Specialty Description. Job satisfaction is positive and training appears on track.

**OCCUPATIONAL SURVEY REPORT (OSR)
PERSONNEL SYSTEMS MANAGEMENT CAREER LADDER
(AFSC 3S0X2)**

INTRODUCTION

This is a report of an occupational survey of the Personnel Systems Management (PSM) career ladder conducted by the Occupational Analysis Flight, Air Force Occupational Measurement Squadron. The survey was conducted to obtain current job and task data. Data collected through this OSR will be utilized by training development personnel to review courses and related training documents.

This career ladder was formerly AFSC 731X0, which was created on 30 April 1989 when various functions were moved from the Personnel specialty (AFSC 732X0). In November 1993, the AFSC was changed to the current 3S0X2 designation. This is the first survey conducted for this AFSC since its creation in 1989.

Background

As described in the AFMAN 36-2108 *Specialty Description* for AFSC 3S0X2, dated 31 October 1994, members: perform PSM functions, prepare and operate personnel system equipment (PSE), and perform operator maintenance and administrative functions. They interface with personnel computer systems activities, develop and revise personnel data systems, and plan and organize personnel data processing systems.

PSM members are also responsible for supervising, planning, and coordinating operations of PSE and activities relating to systems control, equipment, resource management, and personnel data security. They perform functions relating to operation, maintenance, and management of personnel computer systems; and analyze and develop plans for collecting and processing personnel data. They monitor functional personnel information systems and oversee military personnel data activities.

AFSC 3S0X2 is a lateral career ladder, with no direct entry into it from basic training. Members cross-training into the specialty must first obtain a 5-skill level in AFSC 3S0X1, Personnel, and complete course E3ALR3S032 at Keesler AFB MS. Entry into the career ladder currently requires an Armed Forces Vocational Aptitude Battery minimum score of 43 General.

APPROVED FOR PUBLIC RELEASE; DISTRIBUTION UNLIMITED

SURVEY METHODOLOGY

Inventory Development

The data collection instrument for this occupational survey was USAF Job Inventory (JI) AFPT 90-3S0-055, dated January 1995. The Inventory Developer prepared a tentative task list by reviewing pertinent career ladder publications, directives, and a previous JI and OSR which included AFSCs 732X0, 731X1, and 732X4. This task list was further refined and validated through personal interviews with 19 subject-matter experts (SMEs) representing a variety of major commands (MAJCOMs) at the following locations:

<u>BASE</u>	<u>UNITS VISITED</u>
Keesler AFB MS	336 TTS
Langley AFB VA	1 MSSQ
Scott AFB IL	375 MSSQ
Randolph AFB TX	AFPC; 12 MSSQ
Lackland AFB TX	37 MSSQ
Hensley Field TX	136 AW
NAS, New Orleans LA	926 MPF

The resulting JI contained a comprehensive listing of 411 tasks grouped under 8 duty headings, with a background section requesting such information as grade, MAJCOM, job title, time in present job, time in service, job satisfaction, functional area, organizational level, prior AFSCs, technical courses completed, and equipment used.

Survey Administration

Survey Control Monitors at base training offices worldwide administered the inventory between April and September 1995 to 461 Active-duty, 154 Air National Guard (ANG), and 58 Air Force Reserve (AFRES) AFSC 3S0X2 personnel holding a 3-, 5-, or 7-skill level DAFSC. Personnel excluded from taking the survey comprised the following: (1) hospitalized personnel; (2) personnel in transition for a permanent change of station; (3) personnel retiring during the

time inventories were administered to the field; and (4) personnel in their job less than 6 weeks. Participants were selected from a computer-generated mailing list obtained from personnel data tapes maintained by the Air Force Personnel Center (AFPC), Randolph AFB TX.

Each individual who completed the inventory first filled in an identification and biographical information section and then checked each task performed in the member's current job. After checking all tasks performed, respondents then rated each task on a 9-point scale showing relative time spent on that task, as compared to all other tasks checked. The ratings ranged from 1 (very small amount time spent) through 5 (about average time spent) to 9 (very large amount spent).

To determine relative time spent for each task checked by a respondent, all of the incumbent's ratings are assumed to account for 100 percent of the member's time spent on the job. First, the ratings are summed. Each task rating is then divided by the sum of task ratings and multiplied by 100 to provide a relative percentage of time for each task. This procedure provides a basis for comparing tasks in terms of both percent members performing and average percent time spent.

Survey Sample

Personnel were selected to participate in this survey to ensure an accurate representation across MAJCOMs and paygrades. Table 1 reflects the distribution, by MAJCOM, of active-duty AFSC 3S0X2 personnel. As of April 1995, the 341 active-duty respondents in the final sample represent 67 percent of all assigned active-duty AFSC 3S0X2 personnel. Also included within the sample were 93 ANG and 39 AFRES 3S0X2 personnel, and 3 respondents who did not indicate their component status. Table 2 reflects the distribution percentages by paygrade groups. Overall, the survey respondents are distributed proportionately across MAJCOMs and paygrades (see Tables 1 and 2) and are representative of the assigned population.

Task Factor Administration

Job descriptions alone do not provide sufficient data for making decisions about career ladder documents or training programs. Task factor information is needed for a complete analysis of the career ladder. To obtain the needed task factor data, selected senior AFSC 3S0X2 personnel (generally E-6 or E-7 craftsmen) also completed a second booklet for either training emphasis (TE) or task difficulty (TD). These booklets were processed separately from the JIs. This information is used in a number of different analyses discussed in more detail within the report.

Training Emphasis (TE). TE is a rating of the amount of emphasis that should be placed on tasks in entry-level training. The 49 senior AFSC noncommissioned officers (NCOs) who completed a TE booklet were asked to select tasks they felt required some sort of structured training for entry-level personnel, and then indicate how much training emphasis these tasks should receive,

E-6	25	25
E-7	10	11
E-8	0	0
E-9	0	0

from 1 (extremely low emphasis) to 9 (extremely high emphasis). Structured training is defined as training provided at resident technical schools, field training detachments, mobile training teams, formal on-the-job training (OJT), or any other organized training method. There was high agreement among these 49 raters. The average TE rating was 2.15, with a standard deviation of 1.99. Any task with a TE rating of 4.14 or above is considered to have a high TE.

Task Difficulty (TD). TD is an estimate of the amount of time needed to learn how to do each task satisfactorily. The 39 senior NCOs who completed TD booklets were asked to rate the difficulty of each task using a 9-point scale (extremely low to extremely high). Interrater reliability was high. Ratings were standardized so tasks have an average difficulty of 5.00 and a standard deviation of 1.00. Any task with a TD rating of 6.00 or above is considered to be difficult to learn.

When used in conjunction with the primary criterion of percent members performing, TD and TE ratings can provide insight into first-enlistment personnel training requirements. Such insights may suggest a need for lengthening or shortening portions of instruction supporting AFS entry-level jobs.

SPECIALTY JOBS (Career Ladder Structure)

Each Air Force occupational analysis begins with an examination of the career ladder structure. The structure of jobs within the PSM career ladder was examined on the basis of similarity of tasks performed and the percent of time spent ratings provided by job incumbents, independent of other specialty background factors.

Each individual in the sample performs a set of tasks called a Job. A hierarchical grouping program, which is a basic part of the Comprehensive Occupational Data Analysis Program system, creates an individual job description for each respondent (all the tasks performed by that individual and the relative amount of time spent on those tasks). It then compares each job description to every other job description in terms of tasks performed and the relative amount of time spent on each task in the JI. The automated system locates the two job descriptions with the most similar tasks and percent time ratings and combines them to form a composite job description. In successive stages, the system adds new members to the initial group or forms new groups based on the similarity of tasks performed and similar time ratings in the individual job descriptions.

When there is a substantial degree of similarity between jobs, they are grouped together and identified as a Cluster. The job structure resulting from this grouping process (the various jobs and clusters within the career ladder) can be used to evaluate the accuracy of career ladder

documents (Career Field Education and Training Plans (CFETP), AFMAN 36-2108 *Specialty Description*, and Specialty Training Standards (STS)), and to gain a better understanding of current utilization patterns.

Overview of Specialty Jobs

Based on the similarity of tasks performed and the amount of time spent performing each task, one cluster and five jobs were identified within the AFSC 3S0X2 survey sample. A listing of these jobs is provided below and illustrated in Figure 1. The stage (ST) number shown beside each title references computer-generated information; the letter "N" stands for the number of personnel in each group.

- I. ENTRY-LEVEL PERSONNEL SYSTEMS MANAGEMENT JOB (STG068, N=18)
- II. PERSONNEL SYSTEMS MANAGEMENT CLUSTER (STG097, N=322)
- III. PERSONNEL SYSTEMS MANAGEMENT READINESS JOB (STG199, N=5)
- IV. CHIEF, PERSONNEL SYSTEMS MANAGEMENT JOB (STG087, N=9)
- V. HQ/MAJCOM PERSONNEL SYSTEMS MANAGEMENT JOB (STG054, N=14)
- VI. SYSTEMS SUPPORT ANALYST JOB (STG079, N=5)

The respondents forming these jobs account for 78 percent of the survey sample. The remaining 22 percent are performing tasks or a series of tasks which do not group with any of the defined jobs. Some job titles for these individuals include: BLMPS Design Analyst, Personnel Concept (PC-III) Configuration Manager, Data Retrieval Analyst, Computer Support Technician, NCOIC Accession and Loss, and Instructor PMS.

Group Descriptions

The following paragraphs contain brief descriptions of the one cluster and five jobs identified through the career ladder structure analysis. Also presented are two tables which reflect the time incumbents spend on duties and selected background data for each group. Table 3 presents the relative time spent by respondents in each job across each duty listed in the JI. Table 4 displays selected background information, for each job discussed within this report. Appendix A at the back of this OSR lists representative tasks performed by active-duty, ANG, and AFRES members of each group.

I. ENTRY-LEVEL PERSONNEL SYSTEMS MANAGEMENT JOB (STG068, N=18). Personnel in this job are very new to the career ladder and are performing a limited number of tasks as they learn their jobs (average number of tasks performed is 47). Sixty-seven percent of their time is spent on tasks relating to Personnel Data System Activities (see Table 3). Their work involves running the day-to-day activities of a PSM office. Examples of tasks performed include:

- add, modify, delete, or reset users
- monitor distributive print
- process distributive print
- suspense purge report lists, HAF rejects lists, or JUMPS rejects
- reset user passwords
- process AUTODIN transcripts

Sixty-one percent of these members are in their first career field assignment (1-48 months TICF). Of these, 55 percent have less than 12 months experience in the career ladder. Eighty-three percent are in paygrades E-4 and E-5. Seventy-eight percent of the members are active-duty and 78 percent are assigned to the CONUS.

II. PERSONNEL SYSTEMS MANAGEMENT CLUSTER (STG097, N=322). This is the core job of the career ladder, comprising 68 percent of the survey respondents. Unlike members of Group I above, these personnel focus on the total spectrum of PSM activities. Both technicians and supervisory personnel are represented in the cluster. Seventy-seven percent of the tasks performed by its members relate to personnel data system or PC-III activities (see Table 3). These individuals perform a broad range of duties within their PSM units, performing an average of 155 tasks. Commonly performed tasks include:

- add, modify, delete, or reset users
- reset user passwords
- load system releases or patches
- emulate users
- perform full system backups
- execute basic disk operating systems (DOS) and UNIX commands
- initiate systems shutdowns
- correct equipment problems
- backup or restore local data bases

Forty-five percent of these members report holding a 5-skill level, while 50 percent indicate they hold the 7-skill level. Predominant paygrades for these personnel are E-4 through E-7. Sixty-seven percent have 49 or more months time in the career field. As for component status, 49 percent are regular active-duty members, 19 percent are ANG on active-duty, 14 percent are ANG Technicians, and 14 percent are AFRES Technicians.

III. PERSONNEL SYSTEMS MANAGEMENT READINESS JOB (STG199, N=5).

The five members of this job concentrate 43 percent of their job time performing contingency or readiness activities. These incumbents also dedicate over 30 percent of their time to administrative and training functions. They perform 147 tasks on the average. Typical tasks performed in this job include:

- load manpower and personnel-base level (MANPER-B) releases or
manpower force (MANFOR) releases
- load routing indicator data bases
- load personnel data base refreshments or replacements
- update MANPER-8 data bases
- establish equipment or supply requirements for PERSCO control
teams
- prepare contingency exercise mobility (CEM) orders for deployments
or exercise operations

Job incumbents average 68 months TICF and 80 percent have less than 48 months time in their present job. Eighty percent hold a 7-skill level. Sixty percent of the members are assigned to CONUS bases. Three of the members hold the rank of MSgt, while the other two hold the rank of TSgt. Only 20 percent of the members are active-duty. Another 20 percent is active-duty ANG, 40 percent AFRES Technician, and 20 percent ANG technician.

IV. CHIEF, PERSONNEL SYSTEMS MANAGEMENT JOB (STG087, N=9).

Members in this job are the senior-level individuals within the career ladder. They perform primarily supervisory functions and spend a majority of their time (66 percent) performing supervisory and administrative tasks (see Table 3). Their job is characterized by directing, planning, and coordinating the day-to-day activities of larger PSM units. Members perform an average of 102 tasks, which include:

- participate in general meetings, such as staff meetings or briefings,
other than conducting
- plan or schedule work assignments or priorities
- conduct general meetings, such as staff meetings or briefings

- determine work priorities
- interpret policies, directives, or procedures for subordinates
- establish work schedules

Seventy-eight percent of the members in this job are located at CONUS bases. Fifty-six percent of the members have a paygrade of E-6, and supervise an average of six individuals each. One hundred percent hold a 7-skill level, and individuals average 101 months TICF. Eighty-nine percent of the members are active-duty, while the other 11 percent are ANG Technicians.

V. HQ/MAJCOM PERSONNEL SYSTEMS MANAGEMENT JOB (STG054, N=14). Members of this job are defined by their duty locations. They do not support bases, but rather they support MAJCOMs or Numbered Air Force commands. Job incumbents spend 45 percent of their time performing personnel data system activities. These airmen perform 76 tasks on the average. Typical tasks performed in this job include:

- write ATLAS variable inquiries
- troubleshoot hardware, software, or communication problems
- research problems with computer products
- execute basic disk operating system (DOS) and UNIX commands
- request systems changes
- participate in general meetings, such as staff meetings or briefings, other than conducting

Job incumbents have an average of 110 months TICF. Forty-three percent of the members hold the rank of TSgt and 100 percent have a 7-skill level. One hundred percent of the members are assigned to CONUS bases. Fourteen percent of the members are assigned to Numbered Air Forces, 50 percent are assigned to MAJCOMs, and 29 percent are assigned to AFPC. Only 14 percent of the members indicated that they supervise anyone. This job is 100 percent comprised of active-duty personnel.

VI. SYSTEMS SUPPORT ANALYST JOB (STG079, N=5). This is the most diverse job within the career ladder. It consists of members assigned to AFPC at Randolph AFB TX. Job members have a variety of responsibilities but are connected by the technical and computer support they provide to other agencies. Members spend 24 percent of their time on systems analysis activities and 24 percent of their time organizing and planning. They perform an average of 32 tasks. Tasks that reflect the nature of the job performed by these group members include:

- determine work priorities
- plan or schedule work assignments or priorities
- initiate or process AF Forms 804 (Personnel Data Systems Requirement/Change Request)
- perform MAJCOM or AFPC analyses of proposals for modifications of new systems
- develop work methods or procedures
- analyze outputs from systems tests

Eighty percent of the members report supervising individuals. Sixty percent of the members hold the rank of E-6, and 100 percent have a 7-skill level. Job incumbents have an average of 147 months TICF, and 51 months in their present job. One hundred percent of the job incumbents are active-duty.

Summary

The PSM career ladder is extremely homogeneous, with most personnel performing a common job of running the day-to-day activities of a PSM office. Active-duty, ANG, and AFRES personnel were performing four of the six jobs, with two jobs (HQ/MAJCOM PSM Job and Systems Support Analyst) being performed only by active-duty personnel. Experience level clearly defines the tasks being performed. Job incumbents with little experience are just learning the job and therefore focus their attention on a relatively small number of tasks. As experience is gained, members begin to perform a wider range of tasks, as well as taking on supervisory responsibilities.

ANALYSIS OF DAFSC GROUPS

An analysis of DAFSC groups, in conjunction with the analysis of the career ladder structure, is an important part of each occupational survey. The DAFSC analysis identifies differences in tasks performed at the various skill levels. This information may be used to evaluate how well career ladder documents, such as the CFETP, AFMAN 36-2108 *Specialty Description*, and the STS reflect what career ladder personnel are actually doing in the field.

The distribution of skill-level groups across the career ladder jobs for both active-duty and ANG and AFRES respondents is displayed in Table 5, while Table 6 offers another perspective by displaying percent time spent on each duty across the skill-level groups.

H PERFORMING CONTINGENCY OR READINESS ACTIVITIES	3	2	2	10	7

NOTE: Columns may not add to 100 percent due to rounding

A typical pattern of progression is noted within the active-duty AFSC 3S0X2 career ladder. Personnel at the 3- and 5-skill levels work in the technical jobs of the career ladder and spend most of their time performing personnel data system and PC-III activities. As incumbents move up to the 7-skill level, higher percentages perform supervision and training functions, although a majority of these individuals (67 percent) are still classified within the PSM Cluster.

Skill-Level Descriptions

Active-duty DAFSC 3S032. The 27 active-duty airmen in the 3-skill level group, representing 6 percent of the survey sample, perform an average of 71 tasks and spend most of their job time performing personnel data system activities (Table 6). Forty-six percent are working in the PSM Cluster, while another 18 percent are in the Entry Level PSM Job (Table 5). The focus of their job is shown by Table 7, which lists representative tasks performed by active-duty 3-skill level incumbents. Most tasks listed relate to Duty E, Performing Personnel Data System Activities, and Duty F, Performing Personnel Concept (PC-III) Activities.

Active-duty DAFSC 3S052. The 166 active-duty airmen in the 5-skill level group represent 35 percent of the total survey sample. They perform an average of 106 tasks. As with 3-skill level personnel, the largest percentage of these incumbents (70 percent) are working in the PSM Cluster. Very few of these incumbents are found in the Entry-Level PSM Job.

Representative tasks performed by 5-skill level incumbents are listed in Table 8. Table 9 reflects those tasks which best differentiate 5-skill level personnel from their 3-skill level counterparts. All tasks in the table show a negative value, indicating that 5-skill level personnel are performing all the tasks performed by 3-skill level personnel. The major difference between the two groups is that 5-skill level personnel perform a broader range of tasks.

Active-duty DAFSC 3S072. The 146 7-skill level personnel perform an average of 113 tasks and represent 31 percent of the survey sample. Like the 3- and 5-skill levels, the 7-skill level personnel still spend over 50 percent of their time performing personnel data system and PC-III activities (see Table 6). Only 34 percent of their time is spent in supervisory or training functions. Accordingly, 67 percent of 7-skill level personnel work in the PSM Cluster. However, small percentages of 7-skill level personnel can also be found in the other jobs identified (see Table 5). Table 10 lists the most common tasks performed by 7-skill level personnel. Most of these involve supervisory functions intermixed with technical tasks. Table 11 shows those tasks which best differentiate the 5- and 7-skill levels. As expected, the key differences are a greater emphasis on supervisory and administrative functions and significantly less emphasis on technical tasks at the 7-skill level.

ANG and AFRES DAFSC 3S052. The 40 airmen in the ANG/AFRES 5-skill level group represent 8 percent of the total survey sample and perform an average of 75 tasks. Table 6 shows that 5-skill level personnel spend 76 percent of their relative job time performing data systems or PC-III activities. Table 5 shows that 5-skill level personnel are either grouped with the PSM Cluster, PSM Readiness Job, or are not grouped. Representative tasks may be found in Table 12.

ANG and AFRES DAFSC 3S072. ANG and AFRES 7-skill level personnel constitute 19 percent of the survey sample and perform an average of 183 tasks. The majority of their time (68 percent) is still spent performing personnel data system or PC-III activities, but they also reported an increased time spent on supervisory and training duties (21 percent). The ANG and AFRES 7-skill level personnel are more involved with technical tasks than their active-duty counterparts. No ANG or AFRES 7-skill level personnel group with the HQ/MAJCOM PSM Job or the Systems Support Job. Table 13 provides a list of representative tasks for these incumbents. Most of these tasks involve technical functions.

Tasks which best differentiate 7-skill level personnel from the 5-skill level ANG and AFRES personnel are presented in Table 14.

Differences Between Active-duty and ANG and AFRES DAFSC 3S0X2. There were several noticeable differences between the active-duty and ANG and AFRES personnel. Table 15 shows that higher percentages of ANG and AFRES personnel concentrate on contingency or readiness activities while more active-duty personnel perform pay systems and Freedom of Information Act tasks. ANG and AFRES personnel perform, on an average, over 40 more tasks than their active-duty counterparts. Many of the differences found between the active-duty and ANG and AFRES skill levels are the result of a difference in organizational structure of the two agencies. As can be expected, there are more active-duty personnel to do the jobs, therefore, they can be more specialized than ANG and AFRES personnel. It is this specialization which appears to produce the differences between the active-duty members and the ANG and AFRES members, not the actual content of the job.

Summary

A normal career ladder progression within the active-duty AFSC 3S0X2 career ladder is evident with personnel at the 3-skill level spending the vast majority of their job time performing technical tasks. A slight shift towards supervisory functions occurs at the 5-skill level, but members still spend more than 80 percent of their duty time performing technical functions. Personnel at the 7-skill level still perform over 50 percent of their time on technical tasks, but are distinguished by their increased time spent on supervisory duties when compared to the more junior personnel. Personnel at this level also perform jobs which require more technical expertise, judgment, and experience. All members of the ANG and AFRES tend to perform a large amount of technical tasks due to the limited number of personnel.

ANALYSIS OF AFMAN 36-2108 *SPECIALTY DESCRIPTION*

Survey data were compared to the AFMAN 36-2108 *Specialty Description* for Personnel Systems Management, effective 31 October 1994. This specialty description is intended to provide a broad overview of the duties and responsibilities of each skill level. In general, the specialty description covers the tasks and jobs performed by career ladder personnel.

MAJCOM GROUPS

Percent members performing tasks within the different MAJCOMs were analyzed for major differences (see Table 16). While the majority of the tasks performed do not vary among MAJCOMs, there were a few differences in tasks performed. Members of AFPC perform an average of only 31 tasks, as compared to an average of 103 tasks performed by members of all other MAJCOMs. This is not surprising since AFPC personnel perform unique jobs which are not representative of the career ladder. While average TAFMS for all MAJCOMs are similar, AFPC individuals have an average of 20 more months TICF (see Table 16).

TRAINING ANALYSIS

Occupational survey data represent one of many sources of information which are used to assist in the development of training programs for career ladder personnel. OSR data useful to training personnel include job descriptions for the various jobs performed within a career ladder, distribution of personnel across career ladder jobs, percentages of personnel performing specific tasks, and percentages of personnel maintaining specific equipment or systems, as well as the difficulty of tasks and TE ratings gathered from senior members of the career ladder.

Training Emphasis (TE) and Task Difficulty (TD) Data

TE and TD data are secondary factors that can help technical school personnel decide which entry-level training tasks to emphasize. These ratings, based on the judgments of senior career ladder NCOs at operational units, provide training personnel with a rank ordering of those tasks considered important for first-assignment airman training (TE), and a measure of the difficulty of those tasks (TD). When combined with data on the percentages of first-assignment personnel performing tasks, comparisons can be made to determine if training adjustments are necessary. For example, tasks receiving high ratings on both task factors (TE and TD), accompanied by

moderate to high percentages performing, may warrant resident training. Those tasks receiving high task factor ratings, but low percentages performing may be more appropriately planned for OJT programs within the career ladder. Low task factor ratings may highlight tasks best omitted from training for first-assignment personnel. This decision must be weighed against percentages of personnel performing the tasks, command concerns, and criticality of the tasks.

To help training personnel focus on tasks which are most appropriate for entry-level training, an additional factor, the Automated Training Indicator (ATI), was assigned to each task in the inventory. A computer program considered percent first-assignment (1-48 months TICF) members performing, TE and TD ratings, and the Course Training Decision Logic Table found in AETCR 52-22, Attachment 1, and assigned an ATI value to each task corresponding to the 18 training decisions on the table. The decision table and explanation of ATIs precede the listing of tasks in descending order of ATI in the TRAINING EXTRACT. Training personnel should focus on tasks with an ATI of 18, which suggests these tasks should be in the entry-level course.

Tasks having the highest TE ratings are listed in Table 17. Included for each task are the percentage of first-job and first-assignment personnel performing and the TD rating. Tasks with the highest TE deal with processing AUTODIN transactions and maintaining Base-Level Personnel System or PC-III tables. All tasks that were given a high TE (rating of 4.14 or above) were in Duty E, Performing Personnel Data System Activities, or Duty F, Performing Personnel Concept (PC-III) Activities.

Table 18 lists the tasks having the highest TD ratings. The percentages of first-job, first-assignment, 5-, and 7-skill level personnel performing, and the TE ratings are also included for each task. Of the 70 tasks that were given a high TD rating (above 6.00), only 23 were in Duty E, Performing Personnel Data System Activities, or Duty F, Performing Personnel Concept (PC-III) Activities. The remaining tasks were spread throughout the other duty titles.

Various lists of tasks, accompanied by TE and TD ratings, are contained in the TRAINING EXTRACT package and should be reviewed in detail by technical school personnel. For a more detailed explanation of TD and TE ratings, see the Task Factor Administration in the **SURVEY METHODOLOGY** section of this report.

First-Assignment Personnel

There is no direct entry into the AFSC 3S0X2 career ladder. All members must hold a 5-skill level in the AFSC 3S0X1, Personnel, career field, prior to entry into AFSC 3S0X2. In this study, there are 110 active-duty members in their first assignment (1-48 months TICF), representing 32 percent of the active-duty survey sample. As displayed in Table 19, approximately 84 percent of their duty time is devoted to technical functions. Figure 2 shows how all active-duty first-assignment personnel are distributed across the jobs identified in the **SPECIALTY JOBS** section of this report. Of the jobs identified, 7 percent of first-assignment personnel are found in the Entry Level PSM Job, and 63 percent are in the PSM Cluster. Table 20 displays commonly performed tasks for first-assignment personnel.

E215	Suspense purge report lists, HAF rejects lists, or JUMPS rejects	64

Specialty Training Standard (STS)

In February 1996, training personnel from Keesler Air Force Base matched tasks in the JI to appropriate sections of the STS. A listing of the STS was then produced showing each STS paragraph and subparagraph, tasks matched, percent criterion group members performing, TE and TD ratings, and ATI. This listing is included in the Training Extract sent to the school for review. Criteria set forth in AETCR 52-22, Attachment 1, were used to review the relevance of each STS paragraph and subparagraph with matched tasks.

Any STS paragraph or subparagraph with matched tasks performed by 20 percent or more of first-job (1-24 months TICF), first-assignment (1-48 months TICF), or 5- or 7-skill level members is considered to be supported and should be retained in the STS. General paragraphs, such as Security, Supervision, Training, and AF Occupational Safety and Health Program (paragraphs 1, 4, 5, & 6) were not reviewed. All other paragraphs were thoroughly reviewed against OSR data. *Overall, the STS provides comprehensive coverage of tasks performed by career ladder personnel across all jobs. Only one entry was unsupported by survey data--13q(1)(e) needs to be reviewed by training personnel and SMEs for deletion in future revisions due to small percentages (less than 20 percent) performing related tasks.*

Tasks not matched to any element of the STS are listed at the end of the STS computer listing. *Table 21 lists examples of tasks which were performed by 20 percent or more of criterion groups, but not matched to any STS item. These tasks should be carefully reviewed by training personnel and SMEs to determine if they should be included in future STS revisions.*

Plan of Instruction (POI)

JI tasks were also matched to POI E3ALR3S032-002 learning objectives by training personnel at Keesler AFB. A product was produced listing learning objectives, tasks matched, and percent first-job (1-24 months TICF) and first-assignment (1-48 months TICF) personnel performing the tasks, and TE, TD, and ATI ratings.

POI learning objectives with tasks matched were reviewed using the standards set forth in Attachment 1, AETCR 52-22, dated 17 February 1989. An objective is considered supported if 30 percent or more of first-job or first-assignment group members perform any of the tasks matched. Any learning objectives which do not meet these criteria should be considered for elimination from the formal course, unless their retention can be justified by some other acceptable basis.

The review of the POI revealed most learning objectives were supported by survey data. Most learning objectives had matched tasks with at least 30 percent of first-job or first-assignment personnel performing. Tasks performed by more than 30 percent criterion group

** Average TD Rating is 5.00

members and not matched to the POI are listed in Table 22. Training personnel should review these to determine if they suggest additional topics that should be included in the entry-level course.

JOB SATISFACTION ANALYSIS

An examination of responses to the job satisfaction questions can give career ladder managers a better understanding of some of the factors which may affect the job performance of airmen in the career ladder. The survey booklet included questions covering job interest, perceived utilization of talents and training, sense of accomplishment from work, and reenlistment intentions. The responses of the current survey sample were then analyzed by making two comparisons: (1) between TICF groups of the PSM career ladder; and (2) across specialty groups identified in the **SPECIALTY JOBS** section of the report.

Table 23 shows first-assignment (1-48 months TICF), second-assignment (49-96 months TICF), and career (97+ months TICF) group data. These data give a relative measure of how the job satisfaction of AFSC 3S0X2 personnel compares within the career ladder. Overall, satisfaction for all three TICF groups in AFSC 3S0X2 is fairly high, although there is a slight drop across the groups as time in the career ladder increases. There was no current data from related career fields to compare with these data.

An examination of job satisfaction data can also reveal the influences performing certain jobs may have on overall job satisfaction. Table 24 presents job satisfaction data for the jobs identified in the career ladder structure for AFSC 3S0X2. Personnel in the HQ/MAJCOM PSM Job and the Systems Support Analyst Job expressed the lowest job interest. These two jobs also scored lower in one or more other areas as well. Another disturbing measurement includes the Perceived Utilization of Training within the Chief PSM Job and Systems Support Job. The jobs reporting the lower levels of satisfaction are completely different from the rest of the career ladder, and it appears as if they are not receiving the necessary guidance to perform their jobs. Training Managers should look into the type and amount of training provided to these individuals. On the other hand, members of the PSM Readiness Job are extremely satisfied with their job. Every member gave the highest possible ratings in three of the five categories.

IMPLICATIONS

As explained in the **INTRODUCTION**, this survey was conducted primarily to provide training personnel with current information on the PSM career ladder for use in reviewing current training programs and training documents. Overall job progression is normal and shows a distinct pattern as one moves from the 3- to the 7-skill level. The AFMAN 36-2108 *Specialty*

E144 Distribute computer products, other than BMDS interface products	61
F244 Load system releases or patches	61
E204 Report hardware and PC-III software problems to AFPC	61
E182 Maintain master file copies of listings, such as TRs, HAF rejects, purges, or strength reports	56
E138 Decollate computer products	56
F230 Correct equipment problems	56
F286 Terminate user sessions	56
E127 Construct and input immediate inquiries or update messages	56
E116 Analyze Headquarters Air Force (HAF) purges	56
E203 Process reentry disks for traffic safety, social actions, hospital, dental, or education offices	50
E219 Upload or download files via file transfer protocol	50
E202 Process Freedom of Information Act (FOIA) requests	50
F249 Maintain PC-III login/password designations	44
F257 Perform full system backups	44

TABLE II
PERSONNEL SYSTEMS MANAGEMENT CLUSTER
(STG097)

REPRESENTATIVE TASKS		PERCENT MEMBERS PERFORMING
F223	Add, modify, delete, or reset users	97
F268	Reset user passwords	97
F244	Load system releases or patches	97
F234	Emulate users	96
F257	Perform full system backups	95
F286	Terminate user sessions	95
E152	Execute basic disk operating systems (DOS) and UNIX commands	94
F260	Print or view end point status reports	94
F238	Initiate systems shutdowns	93
F249	Maintain PC-III login/password designations	92
F230	Correct equipment problems	91
F224	Backup or restore local data bases	91
E127	Construct and input immediate inquiries or update messages	91
E204	Report hardware and PC-III software problems to AFPC	91
E217	Troubleshoot hardware, software, or communication problems	91
F267	Report system problems to field assistance centers (FACs)	91
E126	Construct and input deferred inquiry requests	90
E153	Execute DEMAND, System for Tape Administration and Reporting (STAR), console (CON) mode, conversational time sharing (CTS), and EDITOR commands	90
F239	Input broadcast messages	90
E208	Research problems with computer products	89
F283	Set user default printers	88
E178	Maintain local BLPS or PC-III tables	87
E133	Coordinate system releases	86
E122	Brief MPF personnel concerning personnel system programs	84
F255	Monitor status reports	84
F242	Install new software	83
E182	Maintain master file copies of listings, such as TRs, HAF rejects, purges, or strength reports	83
F241	Install local or remote printers	83
F272	Retrieve system releases documentation or 0002 system notices	82
F222	Add or delete new units or workcenters to an end point	82
F248	Maintain equipment inventory	82
F220	Access or review system generated files	81
F261	Recover or restart refreshes	81
A18	Participate in general meetings, such as staff meetings or briefings, other than conducting	80
F221	Add new user group	80
E119	Assist MPF workcenters on constructing deferred inquiries	80
B44	Inventory equipment, tools, or supplies	80

TABLE III
PERSONNEL SYSTEMS MANAGEMENT READINESS JOB
(STG199)

REPRESENTATIVE TASKS		PERCENT MEMBERS PERFORMING
H367	Load manpower and personnel-base level (MANPER-B) releases or manpower force (MANFOR) releases	100
H370	Load routing indicator data bases	100
H369	Load personnel data base refreshments or replacements	100
H408	Update MANPER-B data bases	100
H352	Establish equipment or supply requirements for PERSCO control teams	100
H390	Prepare contingency exercise mobility (CEM) orders for deployments or exercise operations	100
H400	Request or distribute mobility requirements documents	100
E218	Upload or download combat personnel control system (CPCS) AUTODIN logs	100
H377	Maintain equipment or supplies for PERSCO control teams	100
H378	Maintain MANPER-B data bases	100
H379	Maintain MANPER-B inventories	100
A9	Develop work methods or procedures	100
H409	Verify eligibility of tasked personnel for deployment	100
H360	Initiate or process contingency, exercise, or rotation TDY reports or messages, such as itinerary or departure messages	100
H372	Maintain accountability of personnel selected to fill OPLANs requirements	100
H387	Perform MANPER-B system backup procedures	100
H374	Maintain daily strength totals of TDY and attached personnel	100
H364	Instruct personnel contingency teams	100
H366	Issue ID tags	100
H371	Load support software, such as Sarah-Lite or Enable	100
H388	Perform plans file and mobility file matches	100
H333	Brief deploying personnel	100
H335	Conduct contingency operation/mobility planning and execution system (COMPES) programs	100
A18	Participate in general meetings, such as staff meetings or briefings, other than conducting	100
H350	Distribute daily strength totals of TDY and attached personnel	100
H394	Process Sperry transactions	100
H338	Coordinate deployment of personnel with other MAJCOM or joint service commands	100
B40	Implement security programs or procedures	100
B44	Inventory equipment, tools, or supplies	100
H380	Maintain master files of TDY orders	100
H399	Report MANPER-B outages	100
H353	Establish mobility positions for exercises	100
B39	Implement safety or security programs or procedures	100
H401	Review availability status of personnel for deployments	100

TABLE IV

**CHIEF PERSONNEL SYSTEMS MANAGEMENT JOB
(STG087)**

REPRESENTATIVE TASKS		PERCENT MEMBERS PERFORMING
A18	Participate in general meetings, such as staff meetings or briefings, other than conducting	100
A22	Plan or schedule work assignments or priorities	100
B31	Conduct general meetings, such as staff meetings or briefings	100
A5	Determine work priorities	100
A17	Establish work schedules	100
B37	Direct or implement OJT programs	100
A4	Determine space, personnel, equipment, or supply requirements	100
C75	Maintain use of workspace, equipment, or supplies	100
A25	Plan workshops, seminars, conferences, or briefings	89
C65	Evaluate personnel for compliance with work standards or procedures	89
A14	Establish procedures for accountability of equipment, tools, or supplies	89
B33	Counsel personnel on personal matters	89
B36	Direct maintenance or utilization of equipment	89
B39	Implement safety or security programs or procedures	89
B40	Implement security programs or procedures	89
B35	Direct maintenance of administrative files	89
B43	Interpret policies, directives, or procedures for subordinates	78
A9	Develop work methods or procedures	78
A13	Establish performance standards for subordinates	78
E152	Execute basic disk operating systems (DOS) and UNIX commands	78
A28	Schedule leaves or passes	78
C56	Conduct performance feedback sessions	78
C71	Evaluate work schedules	78
C64	Evaluate maintenance or use of workspace, equipment, or supplies	78
D99	Evaluate in-house training programs	78
A24	Plan safety or security programs	78
C66	Evaluate personnel for promotion, demotion, or reclassification	78
A1	Assign personnel to duty positions	78
C54	Analyze workload requirements	67
B53	Supervise Personnel Systems Management Craftsmen (AFSC 3S072)	67
B44	Inventory equipment, tools, or supplies	67
A19	Plan equipment or facility maintenance requirements	67
B52	Supervise Personnel Systems Management Journeymen (AFSC 3S052)	67
C67	Evaluate procedures for storage, inventory, or inspection of property items	67
C68	Evaluate Quality Air Force (QAF) requirements or procedures	67
B46	Orient newly assigned personnel	67
B38	Implement cost-reduction programs	67
A20	Plan layout of facilities	67
A29	Schedule staff visits, audits, or inspections	67
C63	Evaluate layout of facilities	67

TABLE V

**HQ/MAJCOM PERSONNEL SYSTEMS MANAGEMENT JOB
(STG054)**

REPRESENTATIVE TASKS		PERCENT MEMBERS PERFORMING
A5	Determine work priorities	93
A18	Participate in general meetings, such as staff meetings or briefings, other than conducting	93
E208	Research problems with computer products	93
E217	Troubleshoot hardware, software, or communication problem	93
A9	Develop work methods or procedures	86
E152	Execute basic disk operating systems (DOS) and UNIX commands	86
E165	Initiate or Process AF Forms 804 (Personnel Data Systems Requirement/Change Request)	86
E176	Maintain liaison with major command (MAJCOM) or Air Force Personnel Center (AFPC) on PSM programs	86
E206	Request system changes	86
G332	Write ATLAS variable inquiries	86
A4	Determine space, personnel, equipment, or supply requirements	79
E175	Maintain internal security and password systems	79
E194	Perform preventive or minor-operator maintenance on system equipment	79
E211	Review system modifications, changes, or conversions	79
A14	Establish procedures for accountability of equipment, tools, or supplies	71
A22	Plan or schedule work assignments or priorities	71
B44	Inventory equipment, tools, or supplies	71
E164	Initiate or process AF Forms 3215 (Communications-Computer Systems Requirement Document)	71
A16	Establish suspense systems	64
B47	Prepare supply or equipment requisitions	64
C75	Maintain use of workspace, equipment, or supplies	64
E193	Perform emergency equipment power-off procedures	64
E219	Upload or download files via file transfer protocol	64
A17	Establish work schedules	57
A19	Plan equipment or facility maintenance requirements	57
A25	Plan workshops, seminars, conferences, or briefings	57
C64	Evaluate maintenance or use of workspace, equipment, or supplies	57
E115	Analyze flow-of-personnel transactions	57
E146	Distribute recommendations for new products or modifications to higher headquarters	57
E150	Evaluate deferred inquiry requests	57
G313	Evaluate new products or modifications to existing product requests	57
G322	Perform MAJCOM or AFMPC analyses of proposals for modifications of new systems	57
A11	Draft supplemental policies, office instructions (OIs), or standard operating procedures (SOPs) for geographically separated units (GSUs) or satellite	50
B36	Direct maintenance or utilization of equipment	50
